

Dear Hiring Manager,

I am excited to apply for the Software Engineer/Full Stack Developer position at your organization. With my 5 years of experience in software development, I am confident in my ability to provide valuable contributions to your team. My ultimate goal on every project is to design a program that is truly helpful to the user, and I am thrilled by the opportunity to apply my knowledge in your company.

As a Full Stack Developer at Barclays and Greg Morris Cards, I had the privilege of working on a variety of exciting and challenging projects. From brainstorming to deploying projects with strict deadlines, I gained valuable skills and knowledge that have augmented my problem-solving abilities. I am proficient in developing user interfaces using HTML, JavaScript, and frameworks such as jQuery, React, and AngularJS. I also have experience using Laravel, Vue3, Tailwind, Vuetify, PostgreSQL, DynamoDB, Flask, Docker, REST-API, Git, Blockchain, and AWS Amplify. Currently, I am exploring Hadoop HDFS and Scala to design and implement a high-performance framework ingesting millions of daily transactions, enriching data for upstream applications.

At NTT Data, I provided support for an inventory tracking management system that allowed users to track the inventory product, shipping status, source and destination, and overall quality of the product using Hyperledger Fabric setup which uses technologies like Java, Typescript, Node.js, and Python. Currently, this system is utilized by a Japanese company that recently shifted to Blockchain over traditional Data Storage Systems to track its food inventory. Blockchain applications being a pioneering technology, working in this field has been challenging and exciting. The complexity of handling cryptographic material is very alluring. I received the 'Star Performer of the Team' award as a token of appreciation for my performance.

I am passionate about continually increasing my programming skills to present better solutions to problems and create technology products to support your mission. I am familiar with methodologies such as Agile-SCRUM, ADD, and Waterfall. I have experience working with CI/CD environments & scripting languages such as Docker, Kubernetes, Python, Bash, and Powershell. I have also gained expertise in integrating Blockchain with the Internet of Things (IoT) for Supply Chain Tracking.

Thank you for your time and consideration. I am looking forward to learning more about the position and about the company itself. If you are looking for a well-grounded Developer, please contact me to arrange an interview. I am eager to learn more about how your organization can benefit from my contribution.

Sincerely,
Ankita Kulkarni
